Organising Department	Sociology in collaboration with the IQAC, BDC
Venue	College Auditorium
Date	29.03.2023
Beneficiaries	72

Report of the Program

Global environmental Politics navigates challenges like environmental degradation, biodiversity loss, deforestation, ocean depletion, water and air pollution, exhaustion of natural resources and waste disposal. The key actors who drive it are nation states, international organizations, scientific institutions and NGOs. This is supported by treaties like Paris Agreement and Convention on Biological Diversity aimed at achieving sustainable development and environmental justice. Balancing economic growth with environmental sustainability remains pivotal. Alongwith this, policy should be guided by science while society at large mobilizes to create awareness. These future efforts

Indrila Guha

entail enhanced global cooperation for sustainable development as well as equitable solutions aimed towards addressing critical environmental challenges that impact ecosystems economies and human life across nations worldwide.
